Home Security Advice:- Boundaries

Start by looking at the front, side and rear boundaries. If you were a burglar, how would you gain access?

Front boundaries define ownership and should allow natural vision from neighbours and passers-by, as the perception is that they are effectively policing the front of the property. This makes people acting suspiciously feel more conspicuous.

Side gates are often set back from the front building line, which provides a recessed area for burglars to get into and act, without being seen.

Burglars often find it easy to make their way to the rear of properties unheard and unseen, by simply walking down open driveways or through open or insecure side gates.

Remove the opportunities for burglary: front boundaries should not exceed 1m in height - unless they are metal railings, which allow natural vision through.

Side and rear boundaries should be a minimum of 1.8m in height.

Metal side and driveway gates allow good natural surveillance, but need careful design to reduce climbing points, particularly at the locking and hinge points.

Wooden side and driveway gates should be secured on the inside with two substantial hasps and staples with closed shackle padlocks.

These may cause serious injury, which the occupier could be legally responsible for.

Gravel driveways and paths prevent a silent approach.

Wheelie bins should be stored behind secure side gates until collection day, to prevent them being used as climbing aids.
